

# AUTOMATION: It's About More Than Machines

An automated system is just that - a system, not an individual machine. To experience the real benefits of automation, today's automated facility is a fully integrated ecosystem of equipment, management systems and software specifically designed for your needs.

## 1 Customize Automated Solutions

When you develop a full-line automation system it's designed to not only increase efficiency, but also maximize consistent production while reducing waste.

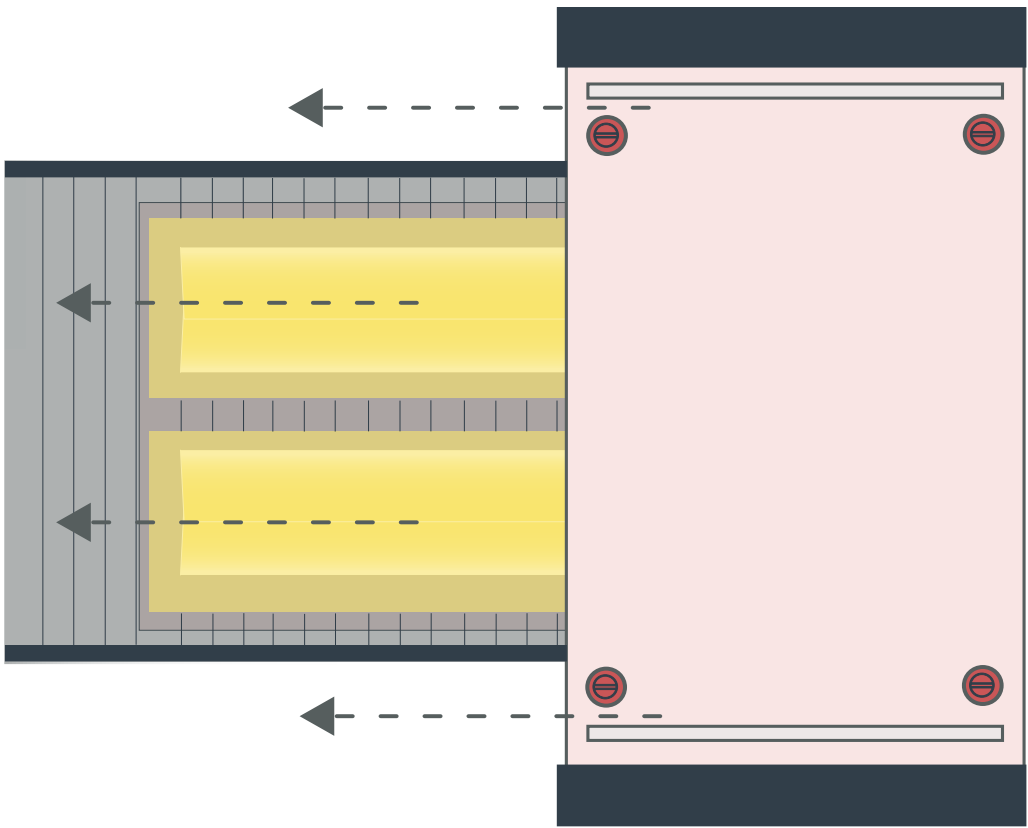

## 2 Communication Is Critical

Smart machines drive efficiency by working together as a system. Precise information is passed up and down the production line to maximize consistency and product yield.

## 3 Brains and Brawn

Vacuum equipment like automatic belt vacuum chamber packaging machines is a perfect solution for the automated integrated production lines for meat, cheese, poultry and fish.
